

# VACANCY

## Senior Engineer – Project Manager Coastal Engineering (m/f)

IMDC is active for more than 35 years in a wide range of domains, including dredging technology, coastal engineering, ports and offshore structures, offshore energy, integrated water management, waterways and inland navigation, hydraulic design, environmental studies and in situ measurement techniques. IMDC has developed a strong knowledge base in computational physics, data-analysis, design and hydro-informatics.

A company is built from the people that work for it. We need you to look for solutions rather than 'output' and look beyond your own technical domain to offer added value to our customers. We strongly adhere to a collaborative and inspiring working atmosphere. We expect an innovative and client-centric attitude. Individually you will be able to further develop your technical competences through personal guidance and training.

We are looking to expand our team with a Senior Coastal Engineer - Project Manager that matches the following profile:

### Responsibilities

- ◆ **As an engineer**, you are experienced in coastal engineering and coastal zone management and resilience.
- ◆ You are knowledgeable in coastal modelling (waves, currents, sediment transport...), design (beach nourishments, erosion protection, jetty and breakwater layout...) and the effects of climate change.
- ◆ You manage the interactions with other disciplines that are relevant for coastal projects (e.g. hydraulic design, geotechnics...) and you are keen to see innovation opportunities on the boundaries of the disciplines.
- ◆ You work both independently and as part of a team.
- ◆ You will show initiative, independence and confidence when making engineering decisions.
- ◆ You guide and supervise the technical work of junior colleagues.
- ◆ You are able to report in a clear but concise way, in different styles and for different audiences, ranging from factual to scientific, from layman to specialist.
- ◆ **As an project manager**, you understand the needs of a client and translate them into adequate and innovative solutions.
- ◆ You manage your project from the commercial offer stage up to project delivery and closing stage, including follow up of contracts, budgets, planning and milestones...
- ◆ You organize, lead and motivate your project team in coastal engineering and management projects.
- ◆ You assure the technical quality of your projects.

### Profile

- ◆ You have a university degree in Civil Engineering or equivalent, preferably with a major in coastal engineering.
- ◆ You have 10 years of relevant experience in marine/coastal consulting and engineering projects.
- ◆ You have demonstrated project and people management skills in multi-disciplinary teams. At the same time, you enjoy working as an expert, providing technical advice in your area of expertise to junior colleagues.
- ◆ You are willing to work on national and also international projects in abroad for short or long periods (as expat).
- ◆ You have commercial awareness and are engaged with clients and finding new project prospects.
- ◆ You are fluent in French and English (both in writing and verbally), Dutch is an advantage.

### What we offer

- ◆ Challenging and relevant projects related to coastal engineering and coastal zone management.
- ◆ A stimulating environment where an innovative and open spirit is highly encouraged.
- ◆ Further developing your skills and competences through training and coaching.
- ◆ A competitive salary and benefits package.
